

Artwork Upload Guidelines – Jigsaw Signs & Print

To ensure the best possible print quality and avoid production delays, please make sure your artwork meets the following requirements before uploading.

File Type

- **PDF format preferred (print-ready)**
- Maximum file size: **150MB per file**
- When exporting layered files, please save with **Adobe PDF compatibility (Version 7 or higher)**
- While we can accept some working files if required, supplying a **print-ready PDF** will always produce the best results

Colour Setup

- All artwork must be supplied in **CMYK colour mode**
- Please avoid mixing **RGB and CMYK** within the same file, as this can cause colour inconsistencies
- Colours may vary slightly from screen to print due to monitor differences and material types

Images & Resolution

- All images must be **embedded** in the file
- Minimum **600dpi recommended** for high-quality print (at final size)
- Images supplied at low resolution may print pixelated or blurry

Size & Layout

- Artwork must be set to the **correct final size**
- Include **3mm bleed and crop marks** where required
- Ensure all important text and elements are kept within safe margins

Fonts & Text

- Please **outline all fonts** or embed them in the PDF
- Minimum recommended text sizes:
 - **General signage & rigid prints:** 10pt positive / 14pt reverse
 - **Vinyl & sticker printing:** 5pt positive / 7pt reverse
 - **Large format banners:** 10pt positive / 14pt reverse
- For variable data jobs, **font files must be supplied**

Vector Graphics

- Logos and line artwork should be supplied in **vector format** wherever possible
- Convert strokes to outlines to avoid printing issues

***Artwork changes may apply.**
